High-level ideas:
1. School management system
- What kind of app would it be?

This web application will contain data about classes schedule.
- Who is this project for?

The project is for administrators, teachers and students of a school.
- What needs will it satisfy?

It will help students and teachers to organize learning process by providing easy way to book learning sessions in certain date, time and classroom. Also, it will help administration of the school to track teachers' workload and students' learning process.

2. Loans - projects distribution app (Banking app)
- What kind of app would it be?

Application for a finance organization (bank) for storing data about received loans and allocation of the loans by projects.
- Who is this project for?

The app is for: management of the bank, corporate finance department (responsible for attracting loans), and project department (responsible for projects financing).
- What needs will it satisfy?

It will help the management to track the allocation of the loans in order to minimize possible losses, corporate finance department to track received loans, and project department to track financed projects.
